PROFESSIONAL SUMMARY

Computer Engineering graduate with hands-on experience in network configuration, systems administration, and IT infrastructure. Built and documented a home lab simulating a real enterprise network environment covering DNS, DHCP, and static IP addressing. Active Directory, and Group Policy implementation. Experienced in monitoring device connectivity, diagnosing communication failures, and maintaining technical documentation through a 300-hour OJT in IoT system development. Seeking an entry-level networking role where I can apply practical infrastructure skills and grow toward a career in networking engineering.

AREA OF EXPERTISE

NETWORK: TCP/IP | DNS | Network Troubleshooting | Static IP Configuration | Device Connectivity
NETWORK TOOLS: Command Line | PuTTY | SSH | Ping & Traceroute Diagnostics | Network Configuration Checks
SYSTEMS: Windows Server 2022 | Active Directory | Linux | Oracle VirtualBox | GitHub
SECURITY & CLOUD FUNDAMENTALS: CISCO Cybersecurity | Ethical Hacking Fundamentals | AWS Cloud Foundations | ISC2 Candidate
DOCUMENTATION: Shift logs | Network Reports | Configuration Documentation | Technical Writing

WORK EXPERIENCE

IoT Technology, Incorporated | Research and Development Intern

Las Piñas City, NCR, Philippines

Completed 300 hours of On-the-Job Training

- Monitored and maintained connectivity across multiple IoT devices and network nodes, identifying and resolving communication failures to ensure stable system operation.
- Diagnosed hardware-software communication issues by gathering device information, analyzing network configurations, and resolving conflicts – closely mirroring 1st-level network support workflows.
- Maintained detailed shift logs and technical documentation of system configurations, test results, and issue resolutions to support team reporting and continuity.
- Configured and validated serial communication between Raspberry Pi units and GSM modules, troubleshooting signal instability and connectivity issues through command-line diagnostics.

TECHNICAL PROJECTS

OmniTxt SMS Communication System | 2026

- Monitored and validated network node connectivity across a multi-port Raspberry Pi GSM gateway, ensuring stable operation across all carrier networks.
- Troubleshooted serial communication failures, GSM signal instability, and device connectivity issues using command-line tools and systematic diagnostics.
- Maintained a SQL database backend for SMS transaction logging, supporting data retrieval and system performance reporting.

Active Directory Home Lab Environment | 2026 (Ongoing)

- Deployed a virtualized domain network using Windows Server 2022 and Active Directory, configuring DNS, DHCP, and static IP addressing to maintain consistent network configuration across all endpoints.
- Enforced network security policies through Group Policy Objects and permission-based folder access, demonstrating practical application of access control in a simulated enterprise environment.
- Documented all network configurations and administrative procedures, maintaining records aligned with real-world network reporting standards.

Cisco Packet Tracer Network Lab | 2026 (Ongoing)

- Built and tested basic network topologies using Cisco Packet Tracer, connecting end devices through switches and configuring static IP addressing.
- Verified device connectivity using ping and ICMP testing, applying fundamental TCP/IP networking concepts in a simulated environment.
- Used Simulation mode to visualize and analyze network traffic behavior across connected devices.

EDUCATION

STI College Las Piñas | Bachelor of Science in Computer Engineering | 2022 – 2026

CERTIFICATION

- AWS Academy Cloud Foundations (2025)
- CISCO Hardware Basics Training Certification (2026)
- CISCO Introduction to Cybersecurity Training Certification (2026)
- CISCO Ethical Hacker Certifications Training Certification (2026)
- ISC2 Candidate Certification (2026)
- Microsoft Azure AZ-900 Fundamentals (Ongoing 2026)
